Date: March 21, 2022

Description:
The Im Lab in the Center for Systems Biology at the Massachusetts General Hospital, Harvard Medical School seeks highly motivated postdoctoral research scholars to develop next-generation diagnostic technologies for clinical translation. The candidate will work in a highly collaborative laboratory of several postdoc members in engineering, computer science, biology, chemistry, and medicine backgrounds. A preferred candidate has expertise in one or more of the following areas: engineering, biosensing, optics (microscopy), microfluidics, organ-on-a-chip, extracellular vesicles, biology, chemistry, material science, neuroscience, cell biology, or relevant areas.

Responsibilities:
The candidate will lead research projects developing new diagnostic technologies and clinical applications.

Requirements:
We seek motivated and creative individuals with a Ph.D. or M.D./Ph.D. degree. A minimum commitment of two years is required.

To apply, please send your CV, a summary of your most significant research accomplishments, and the email addresses of two references to Hyungsoon Im (im.hyungsoon@mgh.harvard.edu) or go to https://csb.mgh.harvard.edu/information/careers#post_129.
