

Postdoc Specialist Roles

Drug Discovery

Role requires demonstrated drug discovery expertise (e.g., relevant publications, significant project experience such as application of relevant laboratory skills during PhD thesis work, etc.)

Ordinarily, this role requires medicinal, synthetic or computational chemistry expertise, target identification, assay development, chemical synthesis and/or lab automation

Basic Qualifications: PhD in biology, chemistry, computation or related disciplines

Advanced Computational Skills

Role requires the use of advanced computational expertise to address problems in biology and medicine

Ordinarily, this role includes rigorous application of ML, AI, and advanced computational concepts to work with large-scale data sets

Basic Qualifications: PhD in computer science, informatics, advanced mathematics, statistics or related disciplines
