Postdoctoral Research Fellow – Neutrophils in Inflammation

A postdoctoral position is open in the laboratory of Dr. Gyongyi Szabo at Harvard Medical School/Beth Israel Deaconess Medical Center (BIDMC) to study the role neutrophil leukocytes in inflammatory liver damage and repair. The project will focus on modulation of inflammation by different neutrophil populations and their interactions with other immune cells and liver parenchymal cells in liver diseases including alcoholic and non-alcoholic steatohepatitis using genetically modified mouse models as well as human patient samples. The role of innate immune signaling pathways, microRNAs and extracellular vesicles will be investigated.

We are seeking a highly motivated candidate with a strong background in immunology/innate immunity.

Required qualifications:
- PhD and/or MD degree in relevant disciplines within the last 2 years
- Excellent organization and communication skills
- Strong analytical skills
- Ability to work within a collaborative environment

BIDMC and Harvard Medical School are a fantastic research environment with great collaborations and resources for aspiring scientists.

Applicants should send a CV and cover letter to gszabo1@bidmc.harvard.edu with subject line Postdoctoral Candidate – Neutrophils
