A postdoctoral position is available immediately in the laboratory of James Chou at Harvard Medical School. The research project investigates the structural and physical basis of immune receptor autoinhibition and activation. The goal is to use the knowledge to guide the development of true agonistic therapeutics for cancer immunotherapy. For general information of our lab, please visit https://chou.hms.harvard.edu/.

The applicant must have a PhD and solid training in protein biochemistry, cell biology, or structural biology. Interested applicants should directly contact James Chou at james_chou@hms.harvard.edu.
